

PRESS RELEASE

Paris, July 2024

Setec énergie environnement, a leader in environmental engineering, launches a platform to improve industrial waste recycling: revoco by setec

With 35 years of experience in waste management in the public and private sectors, Setec énergie environnement has created the revoco by setec brand and digital platform. Revoco by setec is an independent service that connects waste producers and 2,300 waste collectors, digitising their exchanges and analysing data. It enables industries to improve traceability, identify new outlets, benefit from qualified data to meet regulatory requirements, and measure performance and environmental impact.

The Revoco by setec digital platform reveals the potential of industrial waste

Where does the name Revoco come from? "Revoco" is the Latin word for returning to the original state, which refers to the image of recycling.

"Revoco is a transition facilitator. Thanks to this digital platform, waste management becomes a strategic lever for manufacturers. It enables them to measure environmental performance, support the company's CSR policy and, in turn, provides the keys to optimising the value chain," says Karen Diard, Deputy General Director of setec énergie environnement.

What is the benefit for an industrialist?

Revoco by setec enables companies to send each type of waste to the most appropriate channel, access a database of qualified recycling and social economy companies with their geolocation, centralise all related documents (contracts, invoices, etc.) and calculate the carbon footprint and financial gain of these operations in real time.

"With revoco by setec, we help industries increase their waste recycling rates while reducing the associated costs," says Charles Cantogrel, Director of the revoco by setec brand.

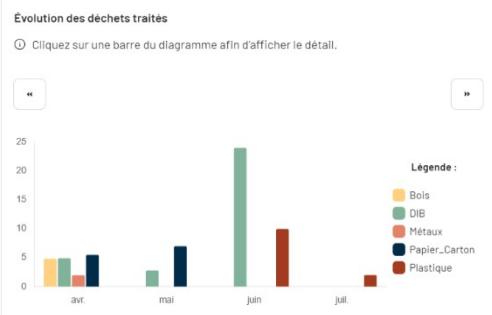

The platform enables industries to meet the regulatory requirements of the AGEC law, but also to go further by measuring the performance and environmental impact of their actions. This facilitates and even enhances CSR policy, which is a significant advantage in the face of increasingly demanding regulations.

"For Kiabi Logistique, waste is a significant cost centre. For this reason, and to support our commitment to reducing our carbon footprint, we participated in the development of the revoco platform. Beyond the simple and intuitive tool, we were supported by a team of engineers who found a solution for reusing clothes hangers. We have thus found an alternative to incineration through an association that will reuse them." Elodie Petit Roux – HSE Coordinator, Kiabi Logistique.

Another example is glassine waste, a smooth, grease- and water-resistant 'siliconised' paper used in the food industry. A group of industries called on the Revoco brand teams to recycle this material. As a result, 250 tonnes of glassine per year were quantified and two recyclers were identified and qualified by engineers from setec énergie environnement. Thanks to recycling, 11 tonnes of CO₂ equivalent were avoided and €7,000 per year will be saved. These results were achieved thanks to the revoco platform and highlight the financial and ecological benefits of the approach.

The engineers at setec énergie environnement behind the Revoco by setec tool

Revoco by setec is the result of more than 35 years of experience at setec énergie environnement in the design and engineering of the most complex waste recycling centres.

The team of experts at Revoco by setec supports local authorities and industries in improving their waste management. Over the years, they have been involved in every stage of the waste treatment value chain, from prevention to disposal, including supporting NGOs specialising in marine plastic waste. They have also been involved in the design of several industrial waste sorting and recycling tools in France.

About setec énergie environnement

Setec énergie environnement is the energy and environment subsidiary of the independent setec group(4,200 employees), a French leader in engineering.

As a committed player in societal transformation in the context of major transitions, setec énergie environnement combines a systemic approach to energy and the environment with specialist expertise in complex projects, offering private and public project developers in France and abroad a comprehensive overview of their environmental impact and support in implementing concrete solutions and monitoring their effectiveness over time.

setec énergie environnement is ISO 14001 and 9001 certified.

Setec énergie environnement has been awarded the ECOVADIS label and is a member of the BPI community of COQ VERT.

About Setec

Founded in 1957, setec is an independent, multidisciplinary engineering group operating in 20 countries and wholly owned by its employees. They design and implement major projects in the fields of buildings, infrastructure, transport, the environment, water management, energy and urban development. They share the ambition of providing sustainable solutions to the challenges and major transitions of today and tomorrow.

The group's 4,200 employees are driven by the Engineers and Citizens approach, embodied by four values: "excellence", a prerequisite for accessing stimulating projects; "people first", because working together in small teams is a guarantee of success, "free to dare", because proposing innovation and new methods enables progress, and "committed, honest and responsible" to shape more responsible territories.
